## Specification (spec):

Specifications represent warranted performance of a calibrated instrument that has been stored for a minimum of 2 hours within the operating temperature range of 0 to 55 °C, unless otherwise stated, and after a 45 minute warm-up period. The specifications include measurement uncertainty. Data represented in this document are specifications unless otherwise noted.

## Typical (typ):

Typical (typ) describes additional product performance information. It is performance beyond specifications that 80 percent of the units exhibit with a 95 percent confidence level at room temperature (approximately 25 °C). Typical performance does not include measurement uncertainty.

## Nominal (nom) or measured (meas):

Nominal (nom) or measured (meas) describes a performance attribute that is by design or measured during the design phase for the purpose of communicating sampled, mean or average performance, such as the 50 ohm connector or amplitude drift vs. time. This data is not warranted and is measured at room temperature (approximately 25 °C).

**Simultaneous and composite modulation**

Simultaneous modulation All modulation types (FM, AM,  $\Phi$ M and pulse modulation) may be simultaneously enabled except: FM and phase modulation cannot be combined; two modulation types cannot be simultaneously generated using the same modulation source. For example the Pulse, AM, and FM can run concurrently and all will modulate the output RF. This is useful for simulating signal impairments, FM chirp RADAR, or scan modulation.

Composite modulation AM, FM, and  $\Phi$ M each consist of two modulation paths which are summed internally for composite modulation. Modulation can be any combination of internal or external sources.

	AM	FM	Phase	Pulse
AM	+	+	+	+
FM	+	+	-	+
Phase	+	-	+	+
Pulse	+	+	+	-

+ = compatible, - = incompatible

- AM specifications apply 6 dB below maximum specified power and down to -15 dBm for Option 520 or -20 dBm for Option 540 from 15 to 35 °C with ALC on.
- ALC off is used for narrow pulse modulation and/or high AM depths with envelope peaks below ALC operating range. Carrier power level will be accurate after a power search is executed.
- Deep AM with ALC on provides increased AM depths and improved distortion, together with closed-loop internal leveling. This mode requires a repetitive AM waveform (frequency > 10 Hz) with peaks > -5 dBm (nom), excluding step-attenuator setting).
- ± 2 dB @ 40 dB, and 50 dB < 31.8 GHz, and ± 4 dB @ 50 dB > 31.8 GHz (meas).
- From 5 MHz to 50 MHz carrier roll off is < 5 dB at 50 kHz rate. From 50 MHz to 3.2 GHz rate is useable up to 100 kHz. Above 3.2 GHz rate is useable to 1 MHz.

- Removable 8 GB solid state memory (SD card) from rear pane.
- User can force all files to be stored only on external memory card including instrument states, user data files, sweep list files, and other files
- Memory sanitizing, memory sanitizing on power on, and display blanking

## Self-test

Internal diagnostic routines test most modules in a preset condition. For each module, if its node voltages are within acceptable limits, the module “passes” the test.

# Inputs and Outputs

## Front panel connectors (all connectors are BNC unless otherwise stated)

RF output	Output impedance 50 $\Omega$ (nom)
Option 513/520	Precision APC-3.5 male, or Type- N with Option 1ED
Option 532/540	Precision 2.4 mm male; plus 2.4–2.4 mm and 2.4-2.9 mm female adapters
Maximum reverse power	0.5 W, 0 Vdc
USB 2.0	Used with a memory stick for transferring instrument states, licenses and other files into or out of the instrument. Also used with U2000 Series USB average power sensors.

## Rear panel connectors

Rear panel inputs and outputs are 3.3 V CMOS, unless indicated otherwise. CMOS inputs will accept 5 V CMOS, 3 V CMOS, or TTL voltage levels.

RF output (1EM)	<ul style="list-style-type: none"> <li>– Output impedance 50 <math>\Omega</math> (nom)</li> <li>– Option 513/520 : Precision APC-3.5 male, or Type- N with option 1ED</li> <li>– Option 532/540: Precision 2.4 mm male; plus 2.4–2.4 mm and 2.4-2.9 mm female adapters</li> </ul>
Sweep out	Generates output voltage, 0 to +10 V when the signal generator is sweeping. This output can also be programmed to indicate when the source is settled or output pulse video and is TTL and CMOS compatible in this mode. Output impedance < 1 $\Omega$ , can drive 2 k $\Omega$ . Damage levels are $\pm$ 15 V.
Ext1	External AM/FM/PM #1 input: Nominal input impedance is 50 $\Omega$ /600 $\Omega$ /1M $\Omega$ nominal: Damage levels are $\pm$ 5 V.
Ext2	External AM/FM/PM #2 input: Nominal input impedance is 50 $\Omega$ /600 $\Omega$ /1M $\Omega$ nominal: Damage levels are $\pm$ 5 V.
Pulse	External pulse modulation input. This input is TTL and CMOS compatible. Low logic levels are 0 V and high logic levels are +1 V. Nominal input impedance is 50 $\Omega$ . Input damage levels are $\leq$ -0.3 V and $\geq$ +5.3 V.
Trigger 1 (in)	Accepts TTL and CMOS level signals for triggering point-to-point in sweep mode. Damage levels are $\leq$ -0.3 V and $\geq$ +5.3 V.
Trigger 2 (out)	Default use is with sweep mode. The signal is high at start of dwell, or when waiting for point trigger in manual sweep mode; low when dwell is over or point trigger is received. This output can also be programmed to indicate when the source is settled, pulse synchronization, or pulse video. Outputs a 2.5V into 50 $\Omega$ nominal. Input damage levels are $\leq$ -0.3 V and $\geq$ +5.3 V.
Reference input	Accepts a 10 MHz reference signal used to frequency lock the internal time base. Option 1ER adds the capability to lock to a frequency from 1 MHz to 50 MHz. Nominal input level -3.5 to +20 dBm, impedance 50 $\Omega$ , sine or square waveform.
10 MHz out	Outputs the 10 MHz reference signal used by internal timebase. Level nominally +5 dBm. Nominal output impedance 50 $\Omega$ . Input damage level is +16 dBm.
ALC in	<p>This female BNC connector is used for negative external detector leveling.</p> <ul style="list-style-type: none"> <li>– Input impedance: 100 k<math>\Omega</math> (nominal)</li> <li>– Signal levels: -0.2 mV to -0.5 V</li> <li>– Damage levels: &lt; -12 V and &gt; 1 V</li> </ul>
Z-Axis output	This female BNC connector supplies a +5 V (nominal) level during retrace and band switch intervals of a step or list sweep. During step or list sweep, this connector supplies a -5 V (nominal) level when the RF frequency is at a marker frequency and intensity marker mode is on. The load impedance should be $\geq$ 5 k $\Omega$ .

USB Type-A	There are two USB 2.0 Type-A connectors on the rear panel. Used with a memory stick for transferring instrument states, licenses and other files into or out of the instrument; also used with U2000 Series USB power sensors.
USB Type-B	There is one USB 2.0 Type-B connectors on the rear panel. The USB connector provides remote programming functions via SCPI.
LAN (1000 BaseT)	The LAN connector provides the same SCPI remote programming functionality as the GPIB connector. The LAN connector is also used to access the internal web server and FTP server. The LAN supports DHCP, sockets SCPI, VXI-11 SCPI, connection monitoring, dynamic hostname services, TCP keep alive. This interface is LXI class C compliant. Trigger response time for the immediate LAN trigger is 0.5 ms (minimum), 4 ms (maximum), 2 ms (typ); delayed/alarm trigger is unknown. Trigger output response time is 0.5 ms (minimum), 4 ms (maximum), 2 ms typical.
GPIB	The GPIB connector provides remote programming functionality via SCPI.
